Securing vandal-proof keyrings

We join the ends of the metal vandal-proof key ring together and screw them together.

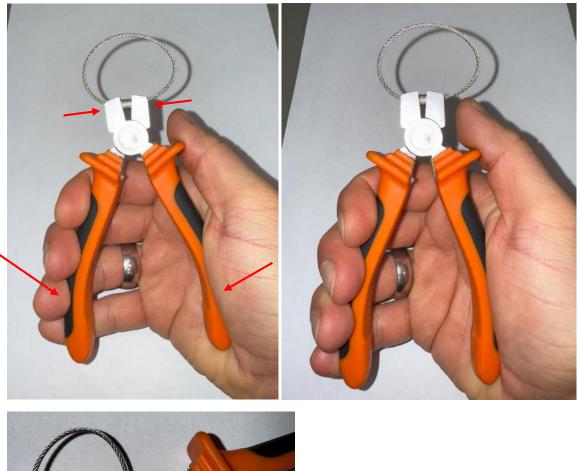

Insert the key ring into the crimping tool until it clicks.

Then press firmly on the crimping tool until the end of the key ring deforms.

Once properly crimped, the key ring cannot be pulled apart or twisted apart.

Note: It may be possible to twist the threaded end of the key ring, but not to untwist it if crimped correctly.
